

Last Light

2 players / Lighthouse rescue / Tabletop prototype

Print on US Letter at 100%. Move cutout tokens between edge-adjacent spaces. Keep rescued boats beside your lighthouse and sunk boats below the board. The map is a paper layout derived from the generated game, not a 3D render.

Tokens & landmarks

Cut on dashed lines. Colored markers and text identify both keepers, the six boats, and the two lighthouse reference tokens.

Landmark tokens stand in for the editable 3D lighthouses. Scoring is recorded by keeping rescued boat tokens next to their owner. No additional scoring counters are needed.

Weather cards

Cut out all six cards. Shuffle face down; keep backs indistinguishable.

<i>Quiet Water</i> QUIET WATER No boat sinks. This round, a Move action allows 1 or 2 orthogonal steps. Each keeper takes one action: Move, Rescue, or Pass.	<i>Break in the Clouds</i> BREAK IN THE CLOUDS No boat sinks. This round, a Move action allows 1 or 2 orthogonal steps. Each keeper takes one action: Move, Rescue, or Pass.
<i>Heavy Fog</i> HEAVY FOG No boat sinks. This round, a Move action allows exactly 1 orthogonal step. Rescue works normally. Each keeper takes one action.	<i>Following Wind</i> FOLLOWING WIND No boat sinks. This round, a Move action allows 1, 2, or 3 orthogonal steps. You may turn between steps. Each keeper takes one action.
<i>Northern Breaker</i> NORTHERN BREAKER Before either turn: sink the lowest-numbered boat still on the sea grid. Ignore rescued and already sunk boats. This round, Move allows 1 or 2 orthogonal steps. Each keeper takes one action.	<i>Southern Breaker</i> SOUTHERN BREAKER Before either turn: sink the highest-numbered boat still on the sea grid. Ignore rescued and already sunk boats. This round, Move allows 1 or 2 orthogonal steps. Each keeper takes one action.

Rules

Setup

LAST LIGHT - a manual tabletop prototype for 2 players; target 10-15 minutes.

COMPONENTS: 9 sea spaces, 2 keeper pawns, 6 numbered boat tokens, 2 lighthouse landmarks, and 6 event cards. The deck object is an editor holder, not an additional physical card. No dice, score counters, round counters, or household game resources are needed. For paper play, print and cut out the supplied spaces, tokens, lighthouse footprints, and six cards. Lighthouse footprints represent the landmarks; no 3D fabrication is required. Keep card backs indistinguishable.

Arrange the sea as a 3x3 grid. Read rows from top to bottom: A1 B1 C1 / A2 B2 C2 / A3 B3 C3. Only these nine spaces are playable. Place Amber's pawn on A2 and Violet's pawn on C2. Place boats as follows: 1 on A1 (3 points), 2 on B1 (2), 3 on C1 (1), 4 on A3 (1), 5 on B3 (2), and 6 on C3 (3). B2 starts empty.

Place Amber's lighthouse to the left and Violet's to the right, with clear table room beside each for rescued boats. Keep a separate common sunk-boat area below the grid. These areas require no extra components. Lighthouses never move and are not playable spaces.

Shuffle all six event cards face down beside the board. Leave room to their right for a face-up discard fan. Choose colors by agreement; Amber takes the first turn of round 1. For a return game, exchange colors. All boat numbers and point values remain public.

Turns

QUICK TEACH: Each round, reveal weather; then each keeper takes ONE action: move toward a boat or rescue the boat on their space. Rescued boats score their printed points. After six rounds, most points wins.

ROUND SEQUENCE

1. Reveal the top event beside the deck. Apply any sinking instruction immediately, before either player acts. A sunk boat goes to the common sunk area and can never be rescued. A keeper on that boat's space stays there unharmed. If no boats remain on the grid, end the game immediately.
2. Amber acts first in odd rounds (1, 3, 5); Violet acts first in even rounds (2, 4, 6). The other keeper then acts once. Count previously discarded events plus the current event to determine the round; no separate tracker is needed.
3. After both actions, add the event to the face-up discard fan. Its movement effect expires. Begin the next round unless the ending condition has occurred. Never reshuffle during the standard game.

ON YOUR TURN, choose exactly ONE:

- MOVE: Take between 1 and the current event's maximum number of steps. Each step enters a space sharing an edge with your current space. You may turn between steps and revisit spaces. No diagonals, wrapping, or leaving the grid. Boats and the other keeper do not block movement; both keepers may share a space. Moving never rescues a boat, even when you stop on it. Unused steps are lost.
- RESCUE: If a boat is on your current space, move that boat directly beside your own lighthouse. You own it permanently. Your keeper stays on the sea space. You do not move before or after rescuing. You cannot rescue an adjacent boat, take an opponent's rescued boat, or rescue a sunk boat. If both keepers share the space, the first one to spend a Rescue action gets the boat.

- PASS: Do nothing. Passing is always legal.

Quiet Water, Break in the Clouds, and both Breakers allow up to 2 movement steps. Heavy Fog allows 1; Following Wind allows up to 3. Events affect both keepers equally. Only the two Breakers sink boats: Northern sinks the lowest printed boat number still on the grid; Southern sinks the highest. Point values do not determine sinking. Boats never move between sea spaces.

WORKED EXAMPLE: Round 1 reveals Quiet Water. Amber moves one step from A2 to A1, where boat 1 waits; it is not rescued yet. Violet moves one step from C2 to C3, where boat 6 waits. Discard Quiet Water. Round 2 reveals Southern Breaker: boat 6, the highest-numbered boat still on the grid, sinks immediately, even though Violet stands there. Violet acts first and moves from C3 to B3. Amber then spends a Rescue action on boat 1, placing it beside the Amber lighthouse for 3 points. Amber remains on A1. Discard Southern Breaker.

EDITOR AND PRINT HANDLING: Resolve every action and event manually. Keep pawns offset within their current space so the space label and any boat remain readable. Keep rescued boats separated beside the owning lighthouse and sunk boats below the grid; position records ownership and status. Fan completed events separately from the current event so round counting is visible. Do not change custom properties during play.

Scoring

Each keeper scores the sum of the printed point values on boats beside their lighthouse. Boat 1 = 3, boat 2 = 2, boat 3 = 1, boat 4 = 1, boat 5 = 2, boat 6 = 3. A boat belongs only to the keeper who used a Rescue action on it. Standing on or visiting a boat grants no ownership or points. Rescued boats are safe from all later events. Sunk boats and boats still on the grid score nothing. Keep the rescued tokens visible as the complete score record; no written score or hidden statistic is needed.

Victory

End immediately when no boats remain on the sea grid, whether the last boat was rescued or sunk. Otherwise, end after both players have taken their actions in round 6. Revealing the sixth event does not by itself end the game: both sixth-round actions still occur unless the grid empties first. At the end of round 6, boats still on the grid are lost and score nothing.

The keeper with more points wins. If points tie, the keeper who rescued more boats wins. If both points and boat counts tie, the game is a shared victory: both keepers kept the same promise to the coast. There are no additional tie breakers.
