

Make your game

2 players / Move and rescue

1. Print single-sided on US Letter at actual size (100%). Measure the calibration line below. Use opaque paper or cardstock.
2. Keep the board page intact. Cut tokens along dashed edges. Optional: glue to thin card before cutting.
3. Cut weather fronts and matching backs. Glue one identical back to every front, or put fronts into opaque sleeves. Shuffle face down.
4. Place components using the starting-position diagram. Read the quick reference and rules. Play one practice round, then reset scores and pieces.

1 inch / 25.4 mm

You need: scissors, optional glue/cardstock. Scores are recorded by keeping rescued boat tokens. No dice are needed.

The 3D landmarks become flat labeled tokens. No 3D printer required. Keep all tokens visible: color is reinforced by names and boat numbers.

Board & starting positions

North is the top of this page. Directions do not depend on where you sit.

NORTH / Amber keeper

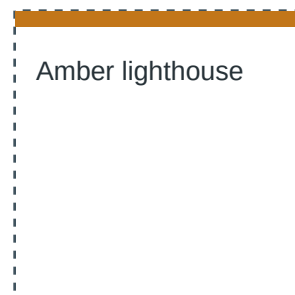

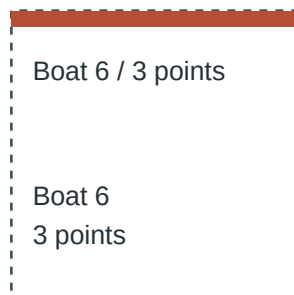

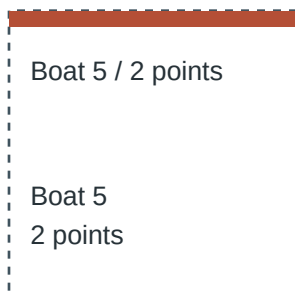

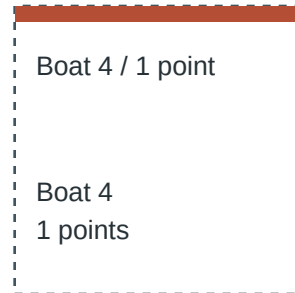

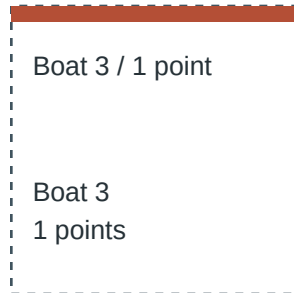

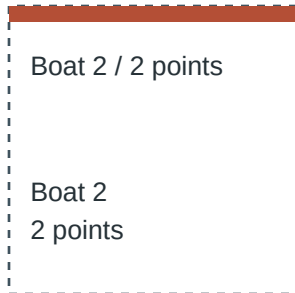

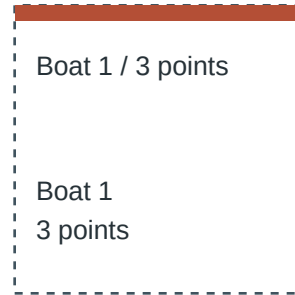

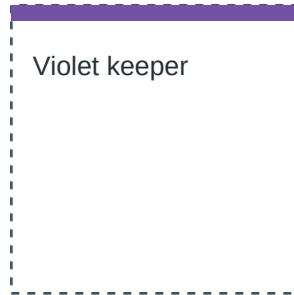

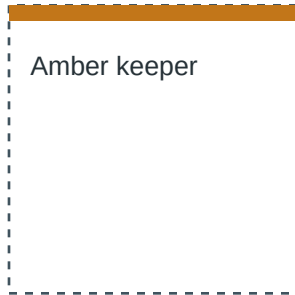

1 / A1 Boat 1 / 3 points	2 / B1 Boat 2 / 2 points	3 / C1 Boat 3 / 1 points
4 / A2 / Amber start Amber keeper starts	5 / B2	6 / C2 / Violet start Violet keeper starts
7 / A3 Boat 4 / 1 points	8 / B3 Boat 5 / 2 points	9 / C3 Boat 6 / 3 points

SOUTH / Violet keeper

Movement follows shared edges. Pawns may share cells. Moving onto a boat does not rescue it; rescuing requires a separate action.

Tokens & landmarks

Cut dashed outlines. Names and numbers also work in grayscale.

Weather fronts

Reveal and resolve weather before either keeper takes an action.

Quiet Water

Quiet Water

No boat sinks.

Move up to 2 orthogonal steps, or rescue a boat on your space, or pass. One action per keeper.

Break in the Clouds

Break in the Clouds

No boat sinks.

Move up to 2 orthogonal steps, or rescue a boat on your space, or pass. One action per keeper.

Heavy Fog

Heavy Fog

No boat sinks.

Move up to 1 orthogonal step, or rescue a boat on your space, or pass. One action per keeper.

Following Wind

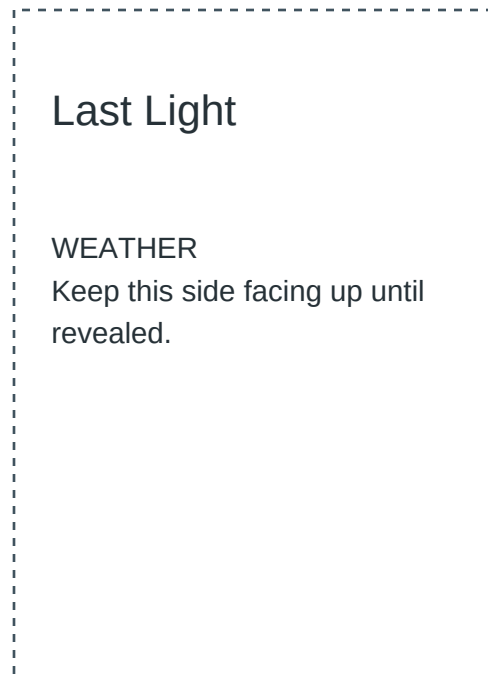

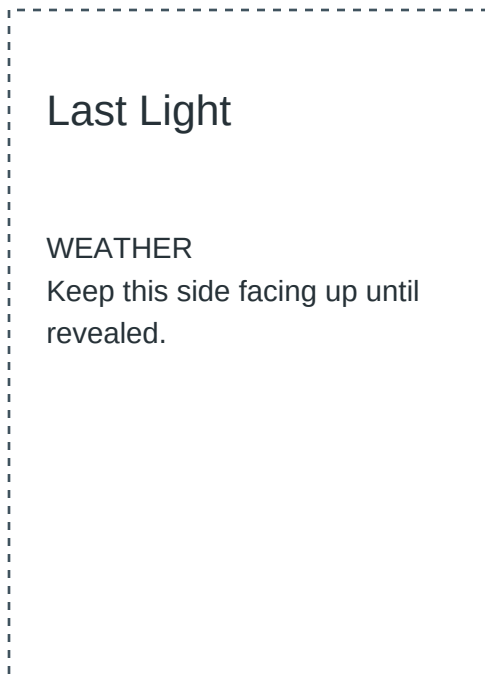

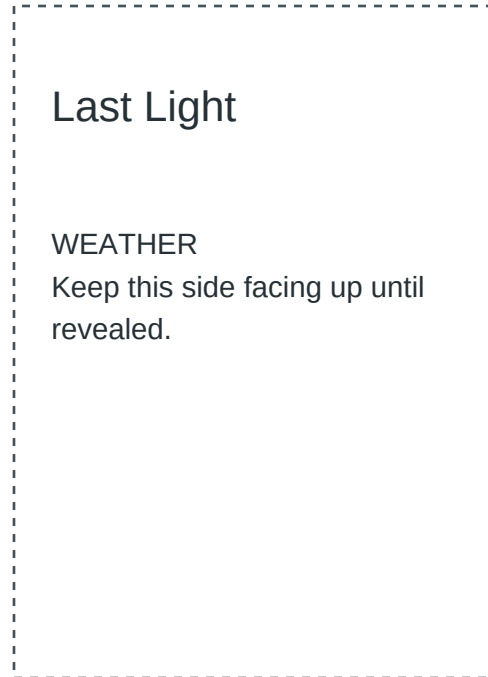

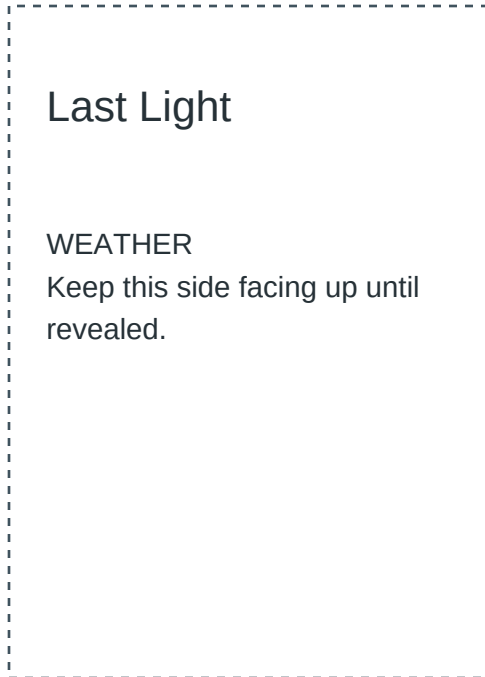

Following Wind

No boat sinks.

Move up to 3 orthogonal steps, or rescue a boat on your space, or pass. One action per keeper.

Weather backs

Cut and glue identical backs to fronts; do not duplex automatically.

Weather fronts

Reveal and resolve weather before either keeper takes an action.

Northern Breaker

Northern Breaker

Before either turn, sink the lowest-numbered boat still on the board.

Move up to 2 orthogonal steps, or rescue a boat on your space, or pass. One action per keeper.

Southern Breaker

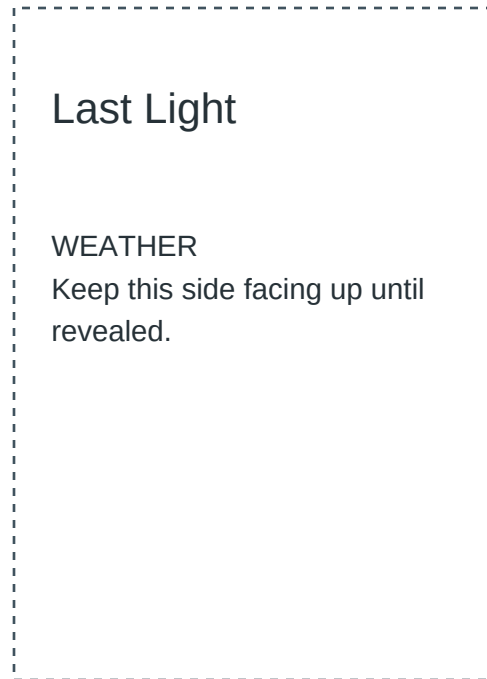

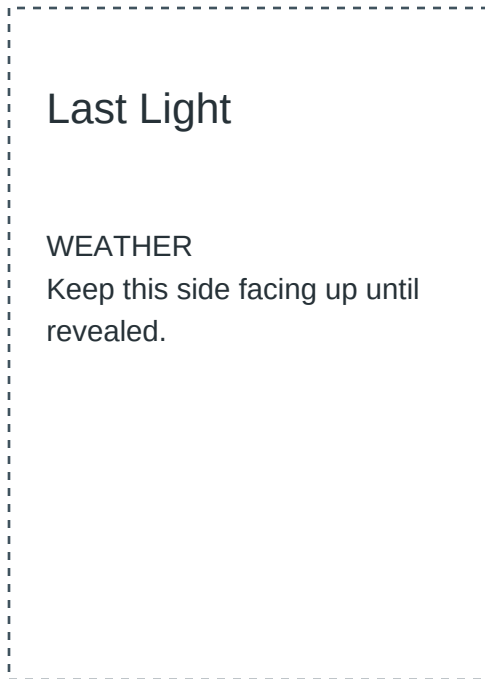

Southern Breaker

Before either turn, sink the highest-numbered boat still on the board.

Move up to 2 orthogonal steps, or rescue a boat on your space, or pass. One action per keeper.

Weather backs

Cut and glue identical backs to fronts; do not duplex automatically.

Quick reference

Keep this page beside the table.

1. Reveal one weather card. Resolve any sinking immediately.
2. First keeper: move OR rescue on your cell OR pass.
3. Other keeper takes one action. Moving never rescues automatically.
4. Discard the weather. Alternate the first keeper each round.
5. End when all boats leave the board or the last round finishes. Compare points, then rescued boat counts.

Example sequence

After your first game: swap seats. Record total time, unclear instructions and repetitive choices. Computer diagnostics cannot establish whether the game is fun.

Rules manual

Setup

Two players: Amber keeper and Violet keeper. Arrange the 3 x 3 board as shown. Place each pawn on its marked starting space. Place boats on their numbered starting spaces; boat values in order are 3, 2, 1, 1, 2, 3. Place the two lighthouse ownership markers beside the board. Shuffle the 6 weather cards face down; keep their backs indistinguishable. Leave separate areas for rescued boats, sunk boats and discarded weather. No dice or extra score counters are needed.

Turns

Each round, reveal one weather card and resolve its sinking effect before either player acts. Lowest/highest means boat number among boats still on the board. Both keepers then take one action. Amber keeper starts odd rounds and Violet keeper starts even rounds. Move 1 to the weather's step limit through edge-adjacent spaces; or rescue a boat on your current space without moving; or pass. Pawns may share spaces and do not block boats or one another. Moving never rescues automatically. Put rescued boats beside the rescuer's lighthouse; sunk boats cannot return. After both turns, discard the event. Example: a keeper moves onto a boat on one turn and must spend a later turn rescuing it, if weather or the other keeper has not removed it.

Scoring

Each rescued boat scores its printed value for its owner. Rescued boats are safe from weather. Sunk and unrescued boats score zero. Keep rescued tokens visible to record scores.

Victory

End as soon as no boats remain on the board, or after both actions in round 6. Higher points wins; tied points are broken by number of boats rescued. If both tie, share victory. The final weather does not end the game until both actions resolve, unless the board empties sooner.
